

Project Type

Overhead Distribution

David J. Sonntag

Manager
Capital Projects

Kevin Tomaszewski

Manager
Contractor Management

DTE Energy
One Energy Plaza
Detroit, MI 48226

DTE Energy is constructing new facilities from existing circuits to attach customers currently served by the City of Detroit's legacy Public Lighting Department infrastructure.

If you would like to speak to either person listed above, please request their contact information from acc-info@asplundh.com.

Scope

New construction and deconstruction of overhead lines

Description

- Schedule all work orders to ensure completion prior to committed in-service dates
- Coordinate material delivery and staging with third party material supplier who is contracted directly with DTE. ACC co-locates with the supplier to enhance overall efficiency.
- Coordinate any vegetation management and traffic control required prior to and during construction
- Perform construction activities associated with various primary and secondary voltages including: conversion of existing traffic signals, primary voltage line extensions, pole replacements and facility upgrades.

Project Results

The initial contract was awarded in July of 2014 and as a result of our performance, ACC was awarded a large scope of work. Effective 1/1/16, ACC is the contractor of choice for DTE's Southwest Region. Total crew count on DTE's system will exceed 35 crews during 2016.

Project Completion
